Unity Development / Gameplay Programming Internship
Available from 15 April 2027 for 12 months

EDUCATION

DigiPen Institute of Technology Singapore Sep 2024 - May 2028
Computer Science in Interactive Media and Game Design (expected)

SKILLS / COMPETENCIES

Unity, C#, C++, FMOD, Git; gameplay scripting, animation integration, UI implementation

WORK EXPERIENCE

Aircraft Maintenance Engineer | Republic of Singapore Air Force Sep 2015 - May 2021

- Conducted pre-flight and post-flight inspections on F-15 aircraft and performed weapon-loading duties, supporting frontline flight operations.

PROJECTS AND ACHIEVEMENTS

Beyond Us | Unity, C# Team project

- Implemented destruction tracking and progressive scene effects to communicate environmental damage, connecting world-state changes to an event-driven ending.
- Integrated player action and NPC idle animations, scene collisions and audio to provide visual and sound feedback during gameplay.

Nookified | Unity, C#, Clipper2 Team project

- Developed polygon room editing with curved corners and pillar cut-outs, enabling custom layouts in a team-built 3D room-planning prototype.
- Implemented grid snapping, camera-relative furniture movement, room finishes and product-information interfaces, enabling users to position and customise room contents.

GrapeEngine / Echoes Below | C++, C#, FMOD Team project

- Developed FMOD playback, mixer buses, fades, low-pass filtering and spatial audio for a team-built engine, enabling controllable game sound and positional effects.
- Exposed engine audio controls to C# scripts and implemented audio management, menus and scene crossfades to connect gameplay with sound and screen transitions.
