Available from 15 April 2027 for a 12-month internship

EDUCATION

DigiPen Institute of Technology Singapore Sep 2024 - May 2028

- Pursuing Computer Science in Interactive Media and Game Design (expected May 2028), applying coursework to team projects that produce playable games and interactive prototypes.

TECHNICAL SKILLS

- Applied Unity, Godot, C#, C++, FMOD and Git across team projects to implement gameplay scripts, audio systems, animation integration and user interfaces.

SELECTED PROJECTS

Beyond Us | Godot Team project

- To make environmental damage visible, built destruction tracking and progressive scene effects that connect changes in the world to an event-driven ending.
- For player and NPC actions, integrated animations, scene collisions and audio so gameplay events produce visual and sound feedback.

Nookified | Unity, C#, Clipper2 Team project

- To support custom room layouts, developed polygon editing with curved corners and pillar cut-outs, allowing users to shape rooms around physical constraints.
- For room furnishing, implemented grid snapping, camera-relative movement, finishes and product-information interfaces, enabling users to position and customise room contents.

GrapeEngine and Echoes Below | C++, C#, FMOD Team project

- To provide controllable sound in a team-built engine, integrated FMOD playback, mixer buses, fades, low-pass filtering and spatial audio, enabling adjustable playback and positional effects.
- Connected engine audio controls to C# scripts and implemented audio management, menus and scene crossfades so gameplay and scene changes can drive sound transitions.

WORK EXPERIENCE & ACHIEVEMENTS

Republic of Singapore Air Force Sep 2015 - May 2021

Aircraft Maintenance Engineer

- To support frontline F-15 flight operations, performed pre-flight and post-flight inspections and weapon-loading duties, contributing to aircraft readiness.

Level Up Hackathon 2026

- Participated in two Level Up hackathons held at *SCAPE, Orchard, in 2026.
